## LAUDA Integral

Process thermostats for professional external thermostating across a wide temperature range from -90 up to $320^{\circ} \mathrm{C}$

## O-1

Application examples

- Process technology
- Process engineering
- Production
- Research
- Thermostating of stirrer tanks
- Temperature control of reactors in chemistry, pharmacy or biotechnology
- Thermal tests on test stands
- Use in material tests

## Extremely flexible and rapid temperature change

Integral T and XT process thermostats are particularly suited for external temperature control of reactors, mini plants and calorimeters. They provide broad temperature ranges and rapid temperature changes. The temperature of external applications can be controlled precisely with defined heating and cooling speeds. With
the Integral T , internal circulation allows temperature control independently of external current resistances. The Integral XT units work on the basis of the flow principle with a cold-oil blanket. As a result, significantly greater temperature ranges and quicker temperature changes are possible.

## Your advantages at a glance

## The Integral T advantages

- Small active internal volume
- Bypass valve between inlet and outlet as a standard feature
- Pivoting control unit with clear keypad and large display

## Your benefits

- Specific equipment range with heating outputs up to 9 kW and cooling outputs up to 13 kW
- Limited target temperature range from -30 to $150^{\circ} \mathrm{C}$
 protected interfaces
- Rapid temperature change and effective control of exothermic reactions
- Pressure reducer to protect pressuresensitive applications and glass
- Easily accessible yet splash-water
- Easy and intuitive to operate

- Strong submersible pump, large expansion volume with overflow connection
- Additional pump as a standard feature with T 4600 units and larger
- Enhanced pump and low-pressure pump available as options
- Suitable for large external circuits
- Full cooling capacity independent from external flow
- May be adapted to various applications

- Compact design, all devices fitted with castors
- Remote control options available with use of accessory
- Application-specific temperature control with high heating and cooling speeds
- Economical temperature control by limitation to essential functions

## LAUDA Integral T

## Integral T <br> Process thermostats up to 2.7 kW

Integral T process thermostats make rapid thermostating with powerful heating and cooling outputs combined with a small active internal volume possible. This minimises thermal drift and exothermic reactions are effectively controlled. Its compact construction is space-saving and the castor set makes the Integral T mobile.

The T control unit can simply be flipped open. The following interfaces are then accessible from below: connector for standby contact input, malfunction (alarm) contact output, analogue inputs and outputs, external Pt 100 and serial RS 232/RS 485 interface.

From the T 4600 units and larger, the Integral T is equipped with an additional pump allowing for more powerful circulation in the internal circuit. An adjustable bypass valve between the supply pipe and the bath of the external circuit allows for pressure reduction (e.g. in order to protect pressuresensitive applications).

Process thermostat T 2200

- Programer with max. 150 temperature/time segments, for up to 5 programs
- Parallel display of 2 temperature values and discharge pressure
- External control via Pt100 temperature probe or standard signal
- Analogue inputs (3) and outputs (2), can be configured to $0 . . .10 \mathrm{~V}$ or $0 / 4 \ldots 20 \mathrm{~mA}$
- Error message for low level, overtemperature, pumps and cooling compressor
- Remote "malfunction" display and stand-by switch via neutral contact
- RS 232/485 interface for PC and LAUDA Wintherm Plus control software

Pump characteristics Heat transfer liquid: Kryo 30

$-25 . . .120^{\circ} \mathrm{C}$ (optional up to $150^{\circ} \mathrm{C}$ )
Options T 1200...T 2200 W

## Integral T <br> Process thermostats up to 13 kW

The more powerful T 4600 to T 10000 W Integral process thermostats have a second pump for circulation in addition to the powerful circulating pump via an internal plate-type heat exchanger and therefore provide efficient and space-saving cooling. This enables a cooling output of 4.6 to 13 kW at $20^{\circ} \mathrm{C}$ with the smallest internal bath volume.

## LAUDA Integral XT

## Extremely broad temperature range and rapid temperature changes: LAUDA Integral XT

## Application examples

- Temperature control of stirrer tanks
- Temperature control of reactors in chemistry, pharmacy or biotechnology
- Thermal tests on test stands
- Use in material tests

LAUDA Integral XT process thermostats allow extremely rapid temperature changes, resulting from the small, internal, thermally active heat transfer medium. The instruments work according to the highly
efficient flow principle with a broad working temperature range. The process thermostats are used where rapid temperature changes or high refrigeration and heating performance are required.

## Your advantages at a glance

## The Integral XT advantages

## Your benefits

- Removable Command remote control with graphic LCD
- Automatic adjustment of the control parameters via integrated software for adaptive control
- Also available as explosion-proof version

- Eight-level Vario pump adjustment
- Infinitely variable control of pump pressure
- Magnetically coupled pump
- Easy and intuitive operation, quick setting changes
- Saves time-consuming calculation of control parameters
- Operation in ex-zones
- Application-specific adaptation of flow and pressure to the application
- Pressure reduction to protect pressuresensitive applications
- No sealing problems at the pump shaft across the entire temperature range

- Two slots for interface modules available
- RS 232/485 interface included
- Recessed filling inlet on the top of the equipment
- Practical drain taps on the sides of the equipment
- Software-based/controlled filling and draining
- Automatic degassing after filling process
- High flexibility for the user for the broadest range of system integrations

- Simple filling with heat transfer liquid from the top of the unit
- Quick and complete drainage of the heat transfer liquid from the system
- Professional and safe start-up
- Temperature control of external application without gas introduction

- SelfCheck assistant shows equipment status clearly on the display
- High level of operating safety and constant monitoring of all equipment functions

## LAUDA Integral XT

## Integral XT <br> Air-cooled process thermostats down to $-80^{\circ} \mathrm{C}$

The LAUDA Integral XT process thermostats are ideally designed for the requirements of rapid and precise temperature control of an external application in process plant and pilot plant environments. The air-cooled process thermostats offer high performance in a small footprint while still providing functionality across a wide temperature range. The special high-temperature version enables process temperatures up to $300^{\circ} \mathrm{C}$. The models XT 750 S and XT 750 HS are available with increased heater power. The large expansion vessel in the LAUDA Integral XT absorbs temperature-induced changes in volume, thereby ensuring smooth operation even in large connected external systems.

## Integral XT

Water-cooled process thermostats down to $-50^{\circ} \mathrm{C}$

Independent of variations in ambient temperature, Integral XT watercooled process thermostats achieve constantly high cooling performance. The temperature of the ambient air remains virtually unchanged due to the dissipation of the process heat through the cooling water. This is a particular advantage in setups similar to production as in process plants or in the mini-plant, where work is conducted under the most strained conditions. Water-cooled Integral XT systems are also the perfect choice for air-conditioned spaces, since they do not tax or place an unnecessary burden on air-conditioning systems. The XT 950 WS provides an increased heater power.

## LAUDA Integral XT

## Integral XT <br> Water-cooled process thermostats down to $-90^{\circ} \mathrm{C}$

The LAUDA Integral XT 1590 WS and XT 490 W process thermostats stand out for their high cooling outputs at very low temperatures. Thanks to the two-stage cascade system, the thermostats are particularly suited for applications in the ultra-low range down to $-90^{\circ} \mathrm{C}$. The water-cooled devices achieve cooling outputs of up to 18.5 kW and maximum heating capacities of 10.6 kW . The XT 1850 WS provides an increased heater power.

## Integral XT <br> High-temperature thermostats up to $320^{\circ} \mathrm{C}$

The LAUDA Integral XT high-temperature thermostats allow for a maximum working temperature of $320^{\circ} \mathrm{C}$. The process thermostats are operated using the Command remote control, which is already utilized in the other XT models. The powerful pump can be regulated at eight different levels, supplying a maximum pressure of 2.9 bar and a flow rate of up to $45 \mathrm{~L} / \mathrm{min}$. The model XT 4 H provides a heating power of 3.2 kW . The XT 8 H is equipped with an 8.0 kW heating system.

## LAUDA Integral XT

## Integral XT <br> High-temperature thermostats with water counter-cooling up to $320^{\circ} \mathrm{C}$

With the XT 4 HW and the XT 8 HW models, water-generated countercooling allows for quick cool-down across the entire temperature range from 30 up to $320^{\circ} \mathrm{C}$. Especially at higher temperatures, the water countercooling is very efficient and cost effective.

Nipples

| Cat. No. | Description |
| :--- | :--- |
| HKA 161 | Nipple, ${ }^{1} / 2^{\prime \prime}$ nipples on spherical line for M30 $\times 1.5$ |
| HKA 162 | Nipple, ${ }^{3} / 4^{\prime \prime}$ nipples on spherical line for M30 $\times 1.5$ |
| EOV 196 | Screw cap, M30 $\times 1.5$ |

Miscellaneous

| Cat. No. | Description | Temperature range ${ }^{\circ} \mathrm{C}$ |
| :--- | :--- | :--- |
| LWZ 046 | Bypass, M30 $\times 1.5$ I/O | $-40 \ldots . .350$ |
| LWZ 071 | Bypass, M38 $\times 1.5$ I/O | $-40 \ldots . .350$ |
| LWZ 089 | Bypass, M30 $\times 1.5$ I/O | $-90 \ldots 220$ |
| LWZ 073 | Ball valve, M30 $\times 1.5$ I on M30 $\times 1.50$ | $-30 \ldots 180$ |
| LWZ 074 | Ball valve, M38 $\times 1.5$ I on M38 $\times 1.50$ | $-30 \ldots 180$ |
